WORK HISTORY

Oct. 2025 - Present

Arab International Commission for Reconstruction in Palestine (AIOCP)

Senior Angular Frontend Developer

I worked as Frontend Developer:
- Development and maintenance of a large-scale governmental platform for damage assessment and reconstruction operations in Gaza Strip.
- Frontend development using Angular 20, TypeScript, Angular Material and Bootstrap.
- Development of citizen-facing portals for claim submission, tracking and follow-up processes.
- Development of institution-facing portals with role-based access and protected workflows.
- Integration with REST APIs and map-related backend services.
- Multi-language support (Arabic and English) using ngx-translate.
- Implementation of route guards, interceptors and application security mechanisms.
- Development of reusable components and scalable application architecture.
- Work with standalone Angular architecture and modern Angular features.
- Integration of Google reCAPTCHA and secure user validation workflows.
- Performance optimization, bug fixing and continuous system enhancements.
- Collaboration with backend and project teams to deliver new features and maintain production environments.

National Integrated Damage Assessment System (Gaza Strip):
- National platform developed to support damage documentation and reconstruction activities.
- Public portal including announcements, reports, news and informational services.
- Citizen Portal for submitting and tracking reconstruction and damage assessment requests.
- Institution Portal for authorized organizations and operational workflows.
- Interactive map integration and GIS-related services.
- Frontend built with Angular, TypeScript, Angular Material, Bootstrap and RxJS.

Oct. 2022 - Present
